Chapter 2. New Features	6
Chapter 3. Resolved Issues	8
Chapter 4. Known Issues	25
Revision History	33
Index	33

Chapter 1. Overview

1.1. About JBoss Developer Studio

JBoss Developer Studio is a set of Eclipse-based development tools. It contains plug-ins that integrate with Eclipse to extend the existing functionality of the integrated development environment (IDE).

JBoss Developer Studio is designed to increase your productivity when developing applications. You can focus on building, testing and deploying your applications because JBoss application development tools are integrated in one IDE. Additionally, each of the tools comprising JBoss Developer Studio has great features to assist your application development:

- ▶ Develop new applications using the wizards and project examples of JBoss Central.
- ▶ Add powerful functionality to applications with minimal effort using Forge Tools.
- ▶ Build web interfaces with ease using the visual editing and drop-and-drag utilities of Visual Web Tools.
- ▶ Incorporate JSF, Seam, JAX-RS, Hibernate, CDI and other popular APIs into applications with simplicity using the tool-driven interface.
- ▶ Preview and test mobile web applications on a variety of simulation mobile devices using BrowserSim.
- ▶ Deploy applications to JBoss runtime servers and the cloud using JBoss Server Manager and OpenShift Tools.

JBoss Developer Studio comes built around Eclipse and packaged with all of the necessary dependencies and third party plug-ins for simplified installing. For developers already running Eclipse, JBoss Developer Studio can also be installed through Eclipse Marketplace. For distinction, this latter JBoss Developer Studio installation is called JBoss Developer Studio BYOE (Bring Your Own Eclipse).

1.2. Use Cases of JBoss Developer Studio

JBoss Developer Studio assists JEE developers by integrating JBoss technology and APIs in a single development environment. Here are a few ways that JBoss Developer Studio makes the work of a developer easier.

Web applications

JBoss Central provides wizards that generate skeleton and sample projects, enabling you to focus on developing the functionality of your applications. The wizards create web applications based on different APIs and technologies, showing the usage and advantages of each. JBoss Developer Studio also offers project file templates in a range of popular programming languages, including HTML, XHTML, and JSF.

JBoss Palette gives access to the core elements of the JSF, Richfaces and Seam APIs, for use in developing the user interfaces of your applications. Elements of these APIs can be dragged and dropped directly into your project so that you can create richer user interfaces quickly. Visual Web Tools offers graphical and source viewing of files and defaults to dedicated editors for different file types. JBoss Developer Studio supports the Java EE 6 specification and provides tools for JAX-RS, Hibernate, and CDI APIs so you can develop the server-side components of your application effortlessly.

Web applications optimized for mobile devices

JBoss Developer Studio supports HTML5 and jQuery Mobile to enable you to create web

applications optimized across desktop and mobile clients. The HTML5 Project wizard in JBoss Central generates a sample application using HTML5 and jQuery Mobile technologies and, together with HTML5 and jQuery Mobile project file templates, helps you to get up and running with new APIs and technologies quickly. BrowserSim allows you to view your web applications on a variety of simulated mobile devices so that you can ensure they will be correct formatted. The integration of Firebug Lite and Weinre capabilities with BrowserSim assists you to inspect the page source of web pages with familiar tools.

Applications for cloud deployment

OpenShift Tools deploys your application directly to the cloud on the Red Hat OpenShift platform. You can create and manage your OpenShift account and manage the deployment of applications in your OpenShift domain from within the IDE. In addition to using the OpenShift Application wizard to create new applications for deployment to OpenShift, OpenShift Tools can import applications already deployed on OpenShift so that you can further develop them and manage their deployment from the comfort of the IDE.

Chapter 2. New Features

There are lots of new features in this release of JBoss Developer Studio:

Source Code

The source code for JBoss Developer Studio has always been available from the Customer Portal for inspection but additional steps have been taken so that you can now also build the source code into a working copy of JBoss Developer Studio.

JBoss Central

The JBoss Central tab has been given a new and improved appearance in order to provide you with a better user experience. Changes include project wizard descriptions when hovering on project icons, increased visibility of quickstart project wizards, links to the Ticket Monster tutorial by JBoss Developer Framework, aggregated blog and twitter feeds via JBoss Buzz, and links to resources such as documentation and forums. Additionally, the available quickstart projects have been expanded to encompass Portal applications. *NeedInfo: Cheat sheets for 'Start from a sample' project wizards are now automatically opened when projects are created and the cheat sheets can be subsequently accessed via the Show In option in project context menus.*

JBoss Server Tools

Support has extended to AS 7.1 and its derived products. Support for previous and current versions of Gateln have been added, specifically versions 3.3.0, 3.4.0 and 3.5.0. You can now customize the behavior governing the addition and removal of deployment scanners to a server through the server editor. *NeedInfo: Additionally, you can choose to either stop or undeploy an application from the server via the administrative console.*

Forge Tools

The embedded Forge runtime server is now version 1.3.0.Final. Wizards are now provided for common Forge commands as a visual and guided alternative to the command line. The current wizards enable you to create entities and scaffold a JSF user interface from JPA entities. The range of wizards will be extended in future releases.

Maven Tools

The JPA, JSF and JAX-RS configurators were contributed to the m2e-wtp project, at the Eclipse Foundation, so they are now available to Eclipse users in addition to JBoss Developer Studio users. While you could already add and remove the Maven repositories defined under profiles in your settings.xml file, you can now also edit existing profiles.

LiveReload Tools

This new tool implements LiveReload functionality in the IDE. LiveReload automatically refreshes web pages as changes to the source files are made and saved, removing the need to manually refresh web pages and improving the workflow for developers. LiveReload Tools can be used in conjunction with both local web application resources and those deployed on servers. Additionally, LiveReload Tools enables LiveReload for web pages viewed on remote devices and computers.

JSF Tools

JSF Tools ensures xmlns are automatically added to files when you insert a JSF component

into a page with the code assist feature. This is possible because JSF Tools provides code assist for all components used in a project and not only those defined in the current page. Strict tag validation has been introduced which checks components and attributes used in XHTML pages against appropriate tag libraries. Tag validation is disabled by default but can be enabled in Preferences under JBoss Tools → Web → JSF → Validation.

CDI Tools

In response to CDI validator warnings, the QuickFix menu will assist in creating missing beans.xml files.

BrowserSim

iPad and iPad Mini skins have been added to the ever growing range of available simulated devices. FireBug Lite and Weinre have been integrated so that you can debug the source pages of your web applications with familiar tools. You can now take screen captures of simulated devices and their web pages.

jQuery Mobile Tools

jQuery Mobile has been further integrated into the IDE, with drag and drop palette capabilities and a code completion feature. Upon dragging and dropping jQuery Mobile components into your HTML and HTML5 source code, corresponding wizards open to assist you in completing the attribute fields of the component and inserting JS and CSS references into source files when missing.

OpenShift Tools

New functionality includes the ability to restart applications deployed on OpenShift from within the IDE, actually restarting your OpenShift node and your application. Additionally, OpenShift Tools has been made smarter: you are automatically asked if you want to publish changes to OpenShift when changes are detected in local copies of your projects, such as after new project creation and project importing and the Console tab is made visible after publishing so that you can have a detailed look at what happened. Enhancements have been made to the information provided about cartridges, warnings about lack of SSH keys and impact of removing cartridges, access to credentials for Jenkins applications, port forwarding for scalable applications, and dragging and dropping projects on an OpenShift server adapter to deploy TomCat applications to OpenShift. Furthermore, OpenShift Tools supports the changes to OpenShift that enable you to use MySQL and Postgres databases simultaneously.

Chapter 3. Resolved Issues

- ▶ [JBDS-1885](#)
aggregation poms (packaging type = pom) in JBDS should be versioned 5.0.0, not 0.0.x
- ▶ [JBDS-2016](#)
JBDS generates (lots of) DEBUG statements to stdout
- ▶ [JBDS-2385](#)
why do we have TWO .product files for JBDS?
- ▶ [JBDS-2401](#)
remove old version of installer code & refactor new stuff to remove "pde" from the name
- ▶ [JBDS-2407](#)
consider a jbds profile or set better defaults when building JBDS
- ▶ [JBDS-2426](#)
Fail to build sources (missing sources/extras)
- ▶ [JBDS-2428](#)
refactor JBDS build so it's not "updatesite" and "product" because URLs are confusing and non-intuitive
- ▶ [JBDS-2429](#)
NullPointerException when closing JBDS 6.0 beta2
- ▶ [JBDS-2455](#)
automated install-grinder install tests for JBDS will always fail because Jenkins can't see <https://devstudio.jboss.com>
- ▶ [JBDS-2456](#)
JBDS should be buildable from source zip
- ▶ [JBDS-2458](#)
JBDS uninstaller doesn't actually remove JBDS
- ▶ [JBDS-2461](#)
Wrong version number in startup dialog
- ▶ [JBDS-2462](#)
Wrong version number in installer dialog
- ▶ [JBDS-2463](#)
Alpha1 build: org.eclipse.equinox.p2.core.ProvisionException: No repository found at <https://devstudio.jboss.com/updates/7.0-development/>
- ▶ [JBDS-2465](#)
Update copyright year in "About JBoss Developer Studio" dialog
- ▶ [JBDS-2466](#)
Links to target platform on JBDS builds download page are not valid and page is mentioning Eclipse Juno instead of Eclipse Kepler as TP
- ▶ [JBDS-2469](#)
Cannot install all extras from central
- ▶ [JBDS-2470](#)
Confusing error message when defining JPP 6.0.0.CR01.1 runtime
- ▶ [JBDS-2475](#)
CLONE - Update copyright year in "About JBoss Developer Studio" dialog
- ▶ [JBDS-2478](#)

JBDS 7 features point to JBDS 6 update sites

▶ [JBDS-2479](#)

CLONE - Wrong version number in installer dialog

▶ [JBDS-2487](#)

default EAP startup parameters unusable

▶ [JBDS-2493](#)

CLONE - include EAP 6.0.1 in JBDS 6.0.1 installer

▶ [JBDS-2497](#)

Building JBDS product w/ -Ppack200 results in NPE and build failure

▶ [JBDS-2502](#)

org.eclipse.jst.server.generic.oc4j plugin has been removed from WTP 3.5.0 M6

▶ [JBDS-2503](#)

JBoss EAP developer studio - Issue while adding custom capability

▶ [JBDS-2514](#)

Multiple conflicting version of as.archive in JBDS snapshot site

▶ [JBDS-2548](#)

Add com.google.gdt.eclipse.suite.e42.feature to JBDS target platform to make building simpler

▶ [JBDS-2551](#)

Unable to install JBoss Tools Maven Packaging Configurator

▶ [JBDS-2553](#)

clean out obsolete QA materials, docs, tests, server specs from JBDS SVN repo

▶ [JBDS-2554](#)

JBDS should be able to build w/ `mvn verify` instead of `mvn install`

▶ [JBDS-2615](#)

Wrong info in About box

▶ [JBDS-2617](#)

JBDS includes pack.gz making the installer & update site zip 200MB bigger

▶ [JBDS-2618](#)

JBDS 7.0 - sources .zip - includes many duplicate files

▶ [JBDS-2621](#)

Update site still contains categories with "JBoss Developer Studio 6.0"

▶ [JBDS-2622](#)

Do we need to add new server types to the installer?

▶ [JBDS-2624](#)

Content of JBDS update site shows Usage and Common Mylyn feature as available for installation from core category

▶ [JBDS-2630](#)

include org.eclipse.jst.server_adapters.ext.feature and org.eclipse.jst.server_core.feature in JBDS instead of org.eclipse.jst.server.websphere.core plugin (since no longer exists in WTP 3.5M7)

▶ [JBDS-2634](#)

JBDS 7.0.beta1 should include EAP 6.1.GA, not Beta1

▶ [JBIDE-4790](#)

Impossible to edit Font Size Property in CSS Properties View

▶ [JBIDE-8428](#)

Content assist inside #{} in text element of xhtml shows JSF tags as proposals

▶ [JBIDE-10525](#)

server editor Server behavior expansion too tall

▶ [JBIDE-10526](#)

look at creting "Run As ... Arquillian Test" or have "launch tab group" for a java launch to enable arquillian server test

▶ [JBIDE-10554](#)

browsersim should remember the last device/window position/size it was started with

▶ [JBIDE-10588](#)

Installing on top of plain Eclipse IDE JBoss Maven Seam Integration plugin breaks Maven integration for WTP

▶ [JBIDE-11558](#)

Repositories are missing source feature titles

▶ [JBIDE-11677](#)

clean up <http://download.jboss.org/jbosstools/updates/requirements/> - move all the m2e children under the m2eclipse folder and ensure all links are correct

▶ [JBIDE-11957](#)

OpenShift Explorer: import wizard don't preselect app type

▶ [JBIDE-12110](#)

BrowserSim: skins are clipped when screen size is to small - should handle it

▶ [JBIDE-12137](#)

openshift server adapter should show progress of git push while running

▶ [JBIDE-12157](#)

Cannot start Gatein 3.3 JBoss 7 with default configuration

▶ [JBIDE-12219](#)

A module cannot be properly removed from server by pressing Delete key

▶ [JBIDE-12244](#)

Wrong link on docs.jboss.org/tools/whatsnew/

▶ [JBIDE-12345](#)

Creating a new jBPM3 project does not open the jBPM perspective

▶ [JBIDE-12432](#)

Investigate enabling p2 download statistics

▶ [JBIDE-12476](#)

Failed tests: testEarProject(org.jboss.tools.seam.core.test.SeamEARTest)

▶ [JBIDE-12592](#)

El is not revalidated in java comments

▶ [JBIDE-12738](#)

OpenShift Explorer: Empty SSH wizard titles

▶ [JBIDE-12794](#)

regenerate multiple.target file from an existing local/target/REPO/ folder to pull in new IU versions

▶ [JBIDE-12905](#)

move base/tests/installation-scripts out

▶ [JBIDE-12973](#)

publish reddeer update site to download.jboss.org

- ▶ [JBIDE-13004](#)
Return back to WTP's original DirtyRegionProcessor clode after it is fixed in WTP 3.5
- ▶ [JBIDE-13017](#)
cannot add nor remove ssh keys with certain accounts
- ▶ [JBIDE-13058](#)
decouple versioning of parent pom from that of target platforms because some TPs are used for multiple parent poms
- ▶ [JBIDE-13076](#)
Marker Resolution Generators should check if IMarker exists
- ▶ [JBIDE-13094](#)
errai cdi stock demo - bad url of the application
- ▶ [JBIDE-13100](#)
2 test failures in org.jboss.tools.vpe.jsp.test.JSPComponentContentTest - testBody and testText
- ▶ [JBIDE-13112](#)
Paths in repository are to long for MS Windows
- ▶ [JBIDE-13129](#)
Beans XML 1.0 Editor throws XModelException: Cdi beans beans.xml already contains Scan
- ▶ [JBIDE-13130](#)
Beans XML 1.0 Editor: Action "Rename" on Scan node in Tree tab does nothing.
- ▶ [JBIDE-13131](#)
Beans XML 1.0 Editor throws XModelException: Cannot add new object to model
- ▶ [JBIDE-13152](#)
BackingStoreException when deleting dynamic web project
- ▶ [JBIDE-13172](#)
Validation problem not removed when package excluded
- ▶ [JBIDE-13176](#)
Project archives loses "Library File Set" definition after closing and reopening JBDS
- ▶ [JBIDE-13183](#)
Seam Components 2.0 Editor: Wrong icon for node components.xml
- ▶ [JBIDE-13184](#)
Seam Components 2.0 Editor: XModelException: Property <property> already contains value <value>
- ▶ [JBIDE-13188](#)
standalone BrowserSim links opens in new device instead of staying in the same
- ▶ [JBIDE-13196](#)
Deployment tab deploy and temp dir not disabled when they should be
- ▶ [JBIDE-13197](#)
CLONE - "null" server displayed in server editor
- ▶ [JBIDE-13198](#)
BrowserSim incorrect behaviour on Mac OS
- ▶ [JBIDE-13203](#)
Faces Config Editor: node "Message Bundle" is not shown as child node
- ▶ [JBIDE-13207](#)
Inactive Deployment Scanner dialog has no context info and apply changes even if Ok not pressed
- ▶ [JBIDE-13212](#)

The server adapter deploys sar project with .java files instead of classes

▶ [JBIDE-13215](#)

New CDI interceptor wizard, name for aroundInvoke method by default is "manage"

▶ [JBIDE-13230](#)

Quick fixes for problem markers for projects don't work anymore

▶ [JBIDE-13232](#)

refactor target platforms' GAVs, names, labels (was target platforms has the same name)

▶ [JBIDE-13235](#)

OpenShift WebUI allows to embed both Mysql & PostgreSQL, tools don't suggest to do so

▶ [JBIDE-13246](#)

When two servers with same version are found only one is added

▶ [JBIDE-13250](#)

Wrong connection pre-selected when creating server adapter for application

▶ [JBIDE-13253](#)

Maven Project Examples have empty group id by default and name complains about being empty

▶ [JBIDE-13258](#)

Add Project Example Site Dialog look and fill problems

▶ [JBIDE-13260](#)

NullPointerException in AnnotationDeclaration.validateNamedValue

▶ [JBIDE-13261](#)

Conflicting handlers for org.jboss.tools.seam.ui.find.references

▶ [JBIDE-13265](#)

Install dialog warning should be properly wrapped

▶ [JBIDE-13269](#)

New Project Example dialog broken layout

▶ [JBIDE-13270](#)

Windows 8 is not being reported in Google Analytics

▶ [JBIDE-13271](#)

BrowserSim: simulator is closing unexpectedly while changing skin

▶ [JBIDE-13275](#)

SSH Keys wizard: colum with key content has wrong title, should "Content", shows "Ttitle"

▶ [JBIDE-13276](#)

Test failures on JAX-RS tooling with "mvn verify" on OSX

▶ [JBIDE-13284](#)

links to jacoco reports are broken in Jenkins jobs in trunk

▶ [JBIDE-13292](#)

BrowserSim: No version in about dialog

▶ [JBIDE-13300](#)

palette NPE for h:dataT able

▶ [JBIDE-13305](#)

offer to close started browsersim when closing eclipse/jbds

▶ [JBIDE-13329](#)

should unified.target includes sources?

▶ [JBIDE-13336](#)

create target platform using Kepler dependencies

▶ [JBIDE-13337](#)

M2E not setting "Run Java Application" classpath properly

▶ [JBIDE-13339](#)

Null Java EE Web Project Archetype

▶ [JBIDE-13342](#)

kitchensink-html5-mobile - Readme isn't shown when importing for first time with empty local repository

▶ [JBIDE-13343](#)

org.jboss.tools.common.core.jdt.test.FavoritesClassControllerTest.testGetFavoritesClassesList fails

▶ [JBIDE-13349](#)

JBoss Way 'about' page refers to JBDS5[OBJ] - can we update this to refer to JBDS6?

▶ [JBIDE-13350](#)

update Seam 2.3.0 runtime used for testing from 2.3.0.ALPHA to 2.3.0.Final

▶ [JBIDE-13351](#)

Dialogs look and feel problems

▶ [JBIDE-13367](#)

NullPointerException in FaceletPageContextImpl.getExternalVars

▶ [JBIDE-13370](#)

Weird warning message from org.jboss.tools.common.model plugin

▶ [JBIDE-13371](#)

test failure in org.jboss.ide.eclipse.as.test.server.XPathModelTest.testEap60Mock (from org.jboss.ide.eclipse.as.test.ASTestSuite) : The XPath File has not been created. Xpaths will be lost on workspace restart
