BA Stunner Properties Menu User Stories and Issues

User Stories

Aimee - Associate Process Manager
As Aimee I need to quickly understand the location of properties settings to add and change properties so I can communicate the right processes to Developers. If I don't see them quickly I get frustrated and will call Deepak so I can describe the changes.

Peter - Practitioner
As Peter I need to easily identify where the properties panel is so I can more quickly describe my work-flows and make edits to existing flows. This helps me communicate to Aimee and Deepak what needs to get done.

Issues found

- "Square Pencil" icon doesn't describe what the panel does
- Users were looking to be able to edit properties from the object edit icons
- In new BP Editor (Stunner) the properties menu is called "Diagram properties" for both the whole diagram and when an object is selected
- "Square Pencil" icon doesn't make it obvious the panel expands (or is a panel)
